DESIGN, FUNCTIONALITY AND PERFORMANCE

UNITED AS ONE

This collection is marked by Brandt's passion for design, research and rigorous attention to detail.

Sleek and refined, the seamless melding of glass to metal and the clean, sophisticated lines thrill aesthetic sensibilities.

INTUITIVE INTERFACE

Cooking modes and programme feedback are displayed against a Full Colored TFT screen or white backlight panels selected via sensitive touch controls. Electronic programming ensures precise temperature control in every function.

“ OVENS RANKED A+, MADE IN FRANCE

All Brandt pyrolytic ovens are rated A+, demonstrating excellent insulation and exceptionally controlled management of heating temperatures which contributes to significant energy saving. ”

TASTE THE DIFFERENCE

Brandt reinvents cooking with our extensively researched heat diffusion technology, Quattro Pulse and patented grill! Injection of heated air into the cavity is accelerated for uniform temperature within the cavity to ensure that cooking quality is perfectly consistent on all levels for excellent results.

OMEGA GRILL

Enjoy perfectly uniform cooking with the Brandt exclusive Omega Grill - precisely crafted to ensure your cooks and bakes turn out beautifully every time.

With Omega Grill

Without Omega Grill

CLEAN & SAFE

COOL DOOR

With 4 layers of glass panes, it ensures your oven door surface is always kept cool throughout cooking and pyrolysis cleaning.

CLEAN 39'

Ultra fast and 50% more economical, this function uses residual heat from the previous cooking cycle to pyroclean the cavity in 39 minutes flat.

PYROLYSIS CLEANING

This is the simplest, most efficient and economical type of cleaning. At high temperatures, oven self cleans greasy build up after successive uses and restores the cavity to look as good as new.

With 3 different Pyro cleaning cycles to choose from, Brandt pyrolytic ovens give you the flexibility for your everyday cleaning needs.

MICROWAVES

BEAUTY AND UTILITY IN ONE

COMFORT

With a clean backlit display, Brandt microwaves provide clear feedback and allow for precise tuning of programmes.

MEMO ACTIVE FUNCTION

If the same function has been used during the last three cooking sessions, it will be memorized and automatically suggested at the next cooking session.

DESIGN

The Brandt microwave collection has a perfect harmony of style and substance with a full glass front, a sleek handle and clean lines to level up your kitchen's style quotient.

EXEMPLARY COOKING QUALITY

CONVECTION

The rotating heat of the combi-microwave ensures you professional results every time. What's more, cooking time can even be reduced by up to 40%!

AUTO PROGRAMME: PERFECT RESULTS EVERY TIME!

The Auto Programme function allows you to cook with ease! Simply select the food type and indicate its weight: the appliance automatically recommends the appropriate cooking mode and time. The memory function also allows you to save the settings of up to 3 functions for easy cooking!

QUATTRO® WAVE TECHNOLOGY

The Quattro® Wave Technology ensures optimal diffusion of the waves inside the cavity with 4 waves and a distributor. Your dishes will be thawed, cooked or reheated evenly.

EASY INSTALLATION

For easy installation, Brandt built-in microwaves have standard cut-out sizes, making it easy for you to switch it up whenever you want. Other models are supplied with mounting kits.

STEAM OVEN

Besides steaming and defrosting, the Brandt Steam Oven is also a **multi-purpose appliance that makes healthier cooking easy.**

Gentle cooking without seasonings - The gentleness of steam cooking brings out natural flavours of your ingredients whilst preserving vitamins and minerals.

Reheating without compromising texture - Heating up food is quick and easy with the Brandt Steam Oven! Steam heats up your dishes without loss of moisture, rehydrating them for a flavourful meal.

Keeping warm - Your steam oven keeps your dishes warm for up to an hour after the end of the programmed timing for you to enjoy your dishes on your own time.

Defrosting without cooking - Keep your ingredients in perfect condition when you defrost with your Brandt Steam Oven. Precise and gentle steam temperature control ensures that your ingredients are defrosted without kicking off the cooking process.

Blanching ease - Preserve the texture and integrity of your ingredients when using the precise temperature control of your Brandt Steam Oven to blanch and prepare them.

INDUCTION HOBS

COMPLETE EXPERTISE

INDUCTION THE BEST OF COOKING

Brandt remains at the forefront of induction technology, having led the shift to induction cooking in the late 1980s. Today, Induction Hobs account for more than 60% of cooking appliance sales!

A NEW ERA OF INDUCTION TECHNOLOGY

Sleek and trendy, Brandt Induction hobs have a perfect harmony of style and function with unrivalled performance and high heating capacities offered in each piece to meet all your cooking needs.

UNION OF FUNCTIONALITY AND COMFORT

PRECISE AND EFFICIENT COOKING

All induction hobs feature electronic controls for simplified usage. Touch sensitive keys and precise heating levels allow you to create perfect dishes, every time.

COOKING AIDES*

The UltraBoost function brings you straight to maximum power. Brandt induction hobs allow you to programme your desired cooking duration and will automatically switch off induction hob at the end of the elapsed time. The Recall function allows you to pull up all the settings made (be it power level or timer) for your easy reference!

*Functions vary from models.

Timer

IMPECCABLE SAFETY

BRANDT'S 10 SAFETY MEASURES

All of Brandt's induction hobs are held to uncompromising safety standards to ensure the best cooking experience for you and your household.

10 SAFETY MEASURES:

- **Residual Heat Indicator** to alert you when zones are still hot (after intensive use).
- **Small Object Detection** to ensure small objects less than 10cm in diameter such as cutlery and cooking utensils are not heated.
- **Anti Overflow** feature that switches the hob off when overflow spills onto control panel or when damp towel is placed over the buttons.
- **Auto-stop System** which will automatically shut off the hob after if left on for overly long periods (depending on power level).
- **Key Lock Control** that can be switched on when the hob is shut off or during cooking.
- **Automatic Saucepan Detection** that ensures the cooking zone only operates when in contact with induction compatible cookware.
- **Temperature Limiter:** This patented Brandt exclusive limits the temperature of the cooking zone to 300°C to prevent the risk of oil ignition.
- **Low Voltage, Connection Error and Over Tension Detection**

horiZone^{tech}

WELCOME TO THE INFINITE

Brandt showcases its expertise in induction cooking technology with the launch of horiZonetech technology. This zoneless cooking concept empowers you to push culinary creativity to the limits, heightening your cooking experience.

horiZonetech boasts a true zoneless induction cooking surface, being able to accommodate all shapes and sizes of cookware - from rectangular pans to oval dishes.

1 FREE, 2 CLASSIC

An ingenious combination of horiZone with a classic cooking surface allows you to express your culinary creativity to the fullest.

LESS TIME HEATING WITH ULTRABOOST

THE PERFECT TECHNOLOGY WHEN YOU DON'T HAVE A MINUTE TO WASTE

Brandt innovates and develops UltraBoost function to allow the induction hob to rise up to 35% faster than the classic Boost function.

Fast and powerful, this function significantly improves the boiling time by enabling you to boil 2 litres of water in 4 minutes and 30 seconds, compared to 6-7 minutes using Boost function.

MULTIPLE CONFIGURATIONS FOR EVERY NEED

Flexible and precise with its adjustable direct access and numerous power levels, horiZone also boasts high heating capacity, with power reaching up to 4000W.

1 large zone for:

Several small pans at the same heat level

OR

1 large dish

2 Independent Cooking Zones:

Cooking at the front, at the back or on the 2 simultaneously, at different powers.

ECONOMICAL COOKING

Induction is quick and economical. It only takes 4 min 40' to bring 2 litres of water to a boil and induction only consumes 225W, as compared to 8min 20' and 390W for a gas burner*.

*2.8 kW induction cooking zone and a 3.5 kW gas burner.

PRECISION COOKING

With induction technology, the cooking hob generates heat exclusively on contact with cookware through a phenomenon of "induced" current produced in the bottom of the cookware, which instantaneously raises its temperature. This heat is then transferred to the food, which is simmered or seared depending on your settings.

EASY MAINTENANCE

Induction leaves the surface around the cooking zone at a low temperature, which prevents spills from sticking to the hob. Just wipe it down with a sponge to make your hob shine.

HOODS

A RANGE TO CATER TO ALL YOUR NEEDS

SUITABLE FOR ALL LAYOUTS AND STYLES

Brandt hoods come in a bevy of designs to suit your kitchen aesthetic. Specially designed to blend into your kitchen furnishings, Brandt hoods allow you to maximise precious kitchen space without compromising efficacy.

All Brandt hoods are customizable to evacuation or recycling mode to suit the needs of your kitchen.

FLOW AND NOISE LEVEL

Brandt supports the code of conduct promoted by the CECED⁽¹⁾ on the statements on air flow and noise level, and guarantees that all data regarding compliant with European standards⁽²⁾.

⁽¹⁾Committee of European Manufacturers of Household Appliances

⁽²⁾EN 60704-2-13, EN 60704-3 and EN 61591

FUNCTIONALITY AND PERFORMANCE

FOR EFFICIENT REMOVAL OF ODOURS AND FUMES

Choose from 3 to 4 speed settings to suit your cooking needs. Equipped with cassette filters and activated charcoal filters, Brandt hoods ensure optimum grease filtration and odour capture. A filter saturation light (available for selected models) also alerts you when it is necessary to clean or change them.

EASY USAGE

Brandt hoods make it easy to activate your needed programmes! You are guided by the electronic control system with speed display, backlit keys and soft keys for easy usage!

EUROPEAN ENERGY LABEL : A MARKER OF EXCELLENCE IN ENERGY CONSUMPTION AND PERFORMANCE

LOOK TO THE « ENERGY LABEL »

Brandt practices absolute transparency with every product carrying the relevant consumption labels for your easy reference.

BRANDT HELP YOU DO THE SELECTION!

WHICH HOOD SUITS YOU MOST?

Chose the design and hood type that better blends in with your kitchen. The Brandt's hood range presents new models that are lined up with the current design tendencies and they perfectly integrate with the other electrical appliances for your kitchen.

DECORATIVE (WALL-MOUNT)

Designed for installation on the wall, Brandt decorative(wall-mount) hoods are sure to be a subtle statement piece in any kitchen.

ISLAND

Designed to be suspended from the ceiling over a central island unit, the sleek aesthetics create a stylish focal point for the kitchen.

SLIMLINE

For installation under a overhung kitchen to provide effective removal of odours and cooking fumes.

TELESCOPIC

Designed to be flush into a overhung kitchen cabinet, a Telescopic hood extends when required for the best possible performance.

SEVERAL ESSENTIAL CRITERIA

POINTS TO BE TAKEN INTO CONSIDERATION WHEN CHOOSING THE HOOD BEST SUITED TO YOUR NEEDS.

- The kitchen size is not, the only factor to consider when choosing the right hood. The following rudimentary calculation will help you determine the adequate suction power for the best results.

■ MEASURE THE VOLUME OF YOUR KITCHEN

(e.g.) $4 \times 3 \times 3 = 36\text{m}^3$

- As a kitchen's ambient air is renewed 10 to 12 times per hour, **multiply the volume by 10** to get adequate power (e.g. $36 \times 10 = 360\text{m}^3/\text{hr}$). As per example, a $400\text{m}^3/\text{hr}$ evacuation hood would be ideal or sufficient.
- In recyding or if your kitchen is open (and subject to air disturbances), it might be wise to opt for a slightly more powerful hood.

■ THE SIZE OF THE HOB

For optimal suction, the width of the hood must be the same size or larger than the hob.

■ COOKING HABITS

To make the right choice, take into account your use of the hood (frequency of cooking, type of dishes (light, oily), number of dishes cooked simultaneously, etc)

HOODS: THINGS YOU NEED TO KNOW

GET RID OF ODOURS AND COOKING FUMES WITH BRANDT HOODS

Brandt hoods offer you 2 types of installation that are best suited to your needs and the constraints of your kitchen.

EXTRACTION

TWO MODES ARE AVAILABLE TO CATER TO YOUR KITCHEN NEEDS

EVACUATION

■ Evacuation mode is ideal because the intake air (charged with odours, steam and smoke) is pushed out. Connect your hood to an outlet to vent the vapours that pass through the cassette grease filter.

■ Brandt hoods are equipped with a non-return valve, an essential accessory so that the evacuated air is not bounced back inwards by winds.

Brandt hoods are supplied with complete equipments for perfect installation in evacuation or recycling mode.

RECYCLING

■ If it's not possible to pipe out air, a recycling installation can clean out the air, ridding it of odours (via a charcoal filter) before diverting the clean air back into your home.

■ Brandt hoods are equipped with a deflector, to return route air through the gills.

FILTERS & MAINTENANCE

METAL GREASE FILTERS

All brandt hoods' grease filters are made of sturdy aluminum and contain a special mesh which captures and locks away the grease from cooking fumes. Once saturated, they can be easily removed and cleaned in a dishwasher or under warm soap water.

CARBON FILTERS

Carbon filters are used in recycling mode only and should be removed from any hood outside extraction. They work by drawing cooking fumes and odours into the carbon filter and neutralising the air through carbon particles before recycling clean air back into the kitchen. The carbon filters require replacement periodically, depending on frequency and type of cooking.

DIRECTIONS FOR USE

BETTER USE!

FOR GREATER EFFICIENCY OF THE HOOD, QUALITY OF USE IS PARAMOUNT.

- Turn on the hood before the beginning of the cooking.
- Do not close all interior doors during operation of the hood.
- Do not open the windows to air currents.
- Let the hood run 5 to 10 min after cooking.
- Adjust the flow depending on the cooking and the presence of grill or fryer.
- Clean grease filters.
- Change the carbon filter regularly (in the case of a recycling mode).

TELESCOPIC HOOD

Designed to be installed into upper kitchen cabinets, Telescopic hoods are almost invisible when not in use.

Simply pull out the hood to operate and retract when not in use.

INSTALLING YOUR INDUCTION HOB BUILT-IN

PROPER POSITIONING

Your hob should be positioned so that the plug-in unit is accessible, so you can easily switch it on and off. The distance between the edge of your appliance and the side and rear walls (or partitions) must be at least four centimeters.

Note: Please consider the size of your cookware before installation; ensure ample space allowance between hob and wall. our appliance can be easily integrated above a cabinet, and oven or a build-in-ready household appliance. You must simply ensure that the air intakes (under the hob) and air outlets (under the front of the hob) are clear and free from obstruction.

BUILDING IN

Follow the diagram above.

Glue the foam seal underneath your appliance by following the outline of the worktop upon which your appliance will rest. This will allow you to achieve a watertight seal with the worktop.

ELECTRICAL SUPPLY

Most induction hobs require up to 16-32 amps for fast and powerful heating. In the event that high amperage is not available, use the minimum of 15 amps, but note that there will be a "sharing" of power between the different zones. This is normal.

TIP

if your oven is located below your hob, the hob's thermal safety measures forbid the simultaneous use of the hob and the pyrolysis program of your oven. Your hob is equipped with an anti-overheating safety device.

This safety feature can be activated, for example, when the hob is installed over an oven that is not sufficiently insulate. If this occurs, a series of small lines appear in the control panel. In this case, we recommend that you increase the ventilation of your hob by creating an opening in the side of your cabinet (8 cm x 5 cm).

WARNING

You must ensure that the air intakes located under your hob remains clear at all times. For all type of installation, your induction hob needs proper ventilation. Do not install above a drawer or sealed unit. The hob must be able to draw air from its underneath.
