4. Close the cover

Ensure that the surface of the heating plate and the surrounding area inside the machine are clean and free of foreign objects.

Clean the bottom and upper edge of the bucket to ensure cleanliness and absence of foreign objects.

Ensure that the bottom and upper edge of the bucket are clean and free of foreign objects, otherwise it will affect the processing effect.

The weight of kitchen wastes should not exceed 1kg and the volume should not exceed the maximum capacity line of the mixing bucket.

Otherwise the machine's handling of kitchen waste will not be effective.

Attention:

- (1). Try to cut kitchen waste into small pieces (such as cutting apples/pears by 50mm).
- (2). Try to cut long kitchen waste short (such as cutting cucumber/radish vegetable stalks by 50mm).
- (3). Try to invest as little salt and other items as possible.
- (4). Do not put in large bone soup or large shellfish items.
- (5). Please do not throw more than 1KG of garbage and do not exceed the maximum capacity line. Otherwise the machine's handling of kitchen waste will not be effective.
- (6). Before closing the lid, align the marked arrows (otherwise it may damage the machine).

In case of power outage or other situations, after manually forcing the lid open, the machine can only be started when the system detects that the lid is closed by pressing the lid open button while the power is on.

5. After closing the top cover, lightly touch the  button to turn on the machine. The machine enters working mode and the UV light is on. Long press for 3 seconds, the machine stops working and returns to standby mode. When in standby mode, the three icon indicator lights on the display panel flash simultaneously.

During the work process, lightly touch the  button and the machine enters a pause state, with the corresponding indicator light flashing. The pause state allows you to open the top cover, lightly touch the  button again, and the machine will continue to run the current program.

After plugging in the power for 3 minutes without any operation, the machine will turn off all lights and enter a locked state. To unlock, press and hold the  button for 3 seconds to put the machine into standby mode.

The indicator light automatically displays the work progress:

-  grinding and drying (yellow light on)
-  disinfection and deodorization (green light on)
-  cooling (blue light on)

The system will determine the processing time based on the degree and quantity of dry and wet garbage: roughly divided into low (2-3hours), Medium (4-6hours). Three processing duration (6-7hours).

6. Gently touch the button, the machine enters cleaning mode, and the three icon indicator lights on the display panel light up alternately. The machine starts working (automatic cleaning time is 1 hour).

If you encounter sticky kitchen waste that is difficult to clean, do not use hardware or metal scraping. You can put 2/3 of water into the bucket, and then press the automatic wash button to let the machine automatically clean. The solid kitchen waste will automatically come off, and then rinse the aluminum bucket of kitchen waste.

7. When you want to open the top cover during work, you need to lightly touch the button to put the machine into a pause state, and then lightly touch the button to open the top cover. After opening the cover for 1 minute, the machine will automatically close the top cover and start, completing the current program. During cleaning, the lid cannot be automatically opened. In standby mode, the lid will automatically close after 3 minutes of automatic opening.

After use:

1. Open the cover

2. Lift the kitchen waste bucket vertically and take it out.

Attention: Note that the temperature remains high even after the program is completed High, please do not open the lid, wait for the equipment to cool down. Only then can the aluminum bucket be removed.

3. Pour the processed waste from the kitchen aluminum bucket into the storage box.

4. When using non cleaning kitchen waste aluminum buckets or directly putting them into the dishwasher, please use a soft cloth and do not scratch the coating.

5. Align the markings and place them back in the kitchen aluminum bucket.

6. After closing the lid, unplug the plug.

7. Mix the obtained fertilizer with soil in a 1:30 ratio, and then add garden plants.

8. Clean the kitchen waste aluminum bucket in the sink or dishwasher, and wipe the outside of the machine with a dry cloth. Finally, put the dry aluminum bucket back into the device and store it. Please use a soft cloth and do not scratch the coating.

- Do not look directly at UV to avoid damaging eyesight.

Note: The UV lamp will only light up when on “power on mode”. Also it will not light up when the cover is opened --no matter the machine is during work or not working.

Attention:

1. When placing the kitchen waste aluminum bucket into the equipment according to step 5, rotate it slightly left and right, and use small force to push it to the bottom, ensuring that it is completely aligned with the triangular mark and in the correct position. After the program ends, the aluminum bucket is still hot. If you want to clean it immediately, please wrap the bucket handle with a damp cloth to avoid scalding.

Keep attachments clean

1. After each use, all accessories need to be cleaned to prevent dirt and scaling. When not in use for a long time, the bucket and heating plate need to be cleaned and dried. Pay attention to the usage environment

1. Applicable temperature range -10°C to 40°C .
2. The relative temperature of the air is below 95% (at a temperature of 25°C).
3. Storage temperature -40°C to 60°C .
4. There should be no flammable, corrosive gases or conductive dust in the surrounding air.

Method of replacing filter device:

1. The filter should be replaced every 6 months after use.
2. After installing the needle, pull out the filter and replace it with a new one.

Tip:

To maintain sealing, the filtering device needs to be tightly attached to the body. Therefore, when replacing the filtering device, users need to use a certain amount of force to pull it out, which is not a quality issue.

How to make perfect compost

Understand your brown and green materials

There are two main ingredients in any successful compost pile: carbon-rich ingredients and nitrogen-rich ingredients.

Brown Material (high carbon content)

Fall leaves, Pine needles, Twigs, chipped tree branches/bark, Straw or hay, Sawdust, Corn stalks, Paper (newspaper, writing/printing paper, paper plates, napkins, and coffee grounds), Dryer lint, Cotton fabric, Corrugated cardboard (without waxy/slick coatings), etc.

<p>Brown Material (high carbon content)</p> <p>Fall leaves, Pine needles, Twigs, chipped tree branches/bark, Straw or hay, Sawdust, Corn stalks, Paper (newspaper, writing/printing paper, paper plates, napkins, and coffee filters), Dryer lint, Cotton fabric, Corrugated card-board (without waxy/slick coatings), etc.</p>
<p>Green Material (high nitrogen content)</p> <p>Grass clippings, Coffee grounds/tea bags, Vegetable and fruit scraps, Trimmings from perennial and annual plants, Annual weeds that haven't set seed, Eggshells, Seaweed, etc.</p>

Striking the Right Carbon-Nitrogen Balance

The magic of composting lies in the interaction between carbon compounds (brown) and nitrogen compounds (green). The perfect ratio of carbon to nitrogen in compost is close to 25:1 to 30:1, at the right wet and dry level.

Get the Feel of Your Pile

A. If you are a home gardening enthusiast, you only need to put the daily kitchen waste into the compost according to the volume of brown material: green material about 1:3. You can also purchase commonly used microbial composting agents to use with them.

B. If you are a professional compost maker, you can browse relevant gardening books and websites to obtain the carbon and nitrogen content of various materials, and use professional calculation methods to control the results.

When the ratio is lower than ideal (too much nitrogen), the pile will be slimy and stinky, simply add more brown materials.

When the ratio is higher than ideal (too much carbon), the pile will be dry; simply add more green materials.

清潔及維護保養

保持表面清潔

1. 清洗前，請拔出插頭，切斷電源。
2. 用柔軟的濕布蘸取少量的中性洗潔液，輕輕擦拭，再用乾布擦乾，不可使用汽油或其他溶液。

保持附件清潔

2. 長期不用時，桶及發熱盤需清潔烘乾。

注意使用環境

1. 適用溫度範圍-10 ~ 40 。
2. 空氣相對溫度在95%以下(溫度為25 時)。
3. 儲存溫度-40 ~ 60 。
4. 周圍空氣中應無易燃性、腐蝕性氣體或導電塵埃的存在。

過濾裝置更換方法：

1. 過濾器使用6個月更換一次
2. 將拉針裝好後向外抽出過濾器,更換為新的過濾器即可

提示：

1. 為保持密封，過濾裝置需要緊貼機身.因此，在更換過濾裝置時，用戶需要使用一定的力度拔出，這不是品質問題。
2. 使用後，活性炭過濾網背後會有少量水珠，這是正常現象（冷熱空氣對流產生水珠）

如何製作完美的堆肥

1. 了解你的棕色料與綠色料

任何成功的堆肥都有兩種主要成分；富含碳的成分和富含氮的成分

2. 達到正確的碳氮平衡

棕色料（含碳量高）
秋葉、松針、樹葉、碎樹葉/樹皮、稻草或乾草、鋸末、玉米稈、紙張（報紙、書寫/印刷紙、紙盤、餐巾紙和咖啡過濾紙）、乾燥棉絨、棉織物、瓦楞紙板
綠色材料（高氮含量）
草屑、咖啡渣/茶包、蔬菜和水果殘渣、多年生和一年生植物的邊角料、未結籽的一年生雜草、海藻等

堆肥的神奇之處在於碳化合物（棕色）和氮化合物（綠色）之間的相互作用。在適當的乾濕水平下，堆肥中碳氮的完美比例25：1至30：1。

3. 感受一下你的堆肥

A、如果你是家庭園藝愛好者，只需日常廚房的垃圾按照棕色料：綠色料1：3的體積投入堆肥即可，你也可以購買常用的微生物堆肥劑來搭配使用。

B、如果你是專業的堆肥製作者，可以查閱相關園藝書籍和網站，取得各種材料的碳、氮含量，並使用專業的計算方式來控制結果。

當比例低於理想值（氮氣過多）時，堆肥會變得粘稠且發臭；只需添加更多棕色材料即可。

當比例高於理想值（碳過多）時，堆肥會乾燥；只需添加更多綠色材料即可，一般來說，富含碳的材料應構成堆的主體，一個好的規則經驗是每次添加一批富氮成分時，添加約4倍的富碳成分（體積，不是重量）。
